

APW President Partners with Vette Corp to Distribute Advanced Thermal Management Solutions for Data Center Infrastructure Facilities in India

Mumbai, 1st October, 2009

APW President Systems (President), the pioneer in enclosure systems (which play a vital role in data centers in the telecom, IT/ITES and electronics infrastructure segments), has entered into a partnership with the US-based Vette Corp (Vette), a leading global provider of thermal management solutions. The partnership is intended to distribute a range of advanced thermal management solutions from Vette to meet the growing demands of data center facilities in India.

According to Peter Wong, Executive Manager, APAC, Datacom Facilities Division, Vette Corp, "We are delighted to be associated with a leader and pioneer in the data center infrastructure domain. With Vette's comprehensive range of advanced thermal management solutions backed by President's professional teams of technical and sales personnel spread over a country-wide network, we are confident that we will be able to deliver to data center managers and consultants in India the necessary level of business critical support and service."

Vette's family of data center liquid cooling products and services help mitigate problems associated with high inlet air temperatures that can cause equipment downtime or premature failure. Vette's high density cooling solutions help clients deal with cooling infrastructure that is stretched beyond its limits and allows operators to fully populate individual racks with positive results and dramatic cost savings.

"Vette's technology and solutions will be a valuable additional resource for offering our customers in India the world's best proven solutions in thermal management, which has become a critical factor in managing data center energy efficiency," said S. Venkatraman, Vice President – Enclosure Solutions and Technical Services, APW President.

"We are pleased to offer the recognized world-class Vette advantage to our data center customers in our growing portfolio of thermal management solutions. Vette's customers benefit from the ability to save 50% or more in floor space and at least 35% in Total Cost of Ownership compared to legacy solutions," said Manish Bhatnagar, Vice President - Cooling Solutions Division, at APW President.

About Vette Corp

Founded in 2004, Vette Corp is a global thermal management solutions provider specializing in solving thermal challenges for leading OEMs, operators and owners of computer, communications and industrial electronic

equipment.

Vette Corp has worked with IBM to license the chilled water Rear Door Heat Exchanger technology. This technology has been patented by IBM in their model, the 'Cool Blue™ Rear Door Heat Exchanger.' However, this can fit a variety of leading third party equipment enclosures.

Vette Corp is privately held and headquartered in Portsmouth, New Hampshire, USA. For additional information about Vette Corp, please visit www.vettecorp.com
